

Previous Version

The Integrated Index was available from the home page, and searched across multiple databases.

Type the keyword(s) in the *Enter search term(s)* field and click the Search button.

Search results for the databases selected were organized by content type and displayed as hypertext links. Hypertext links would open the document, document outline, or links to further clarify the keyword.

New Version

The Main Keyword Search is the home page and searches across multiple databases.

Type the keyword(s) in the entry field and click the **Search** button.

Search results for the databases selected are organized by content type and display as hypertext links. Hypertext links open the document, document outline, or links to further clarify the keyword.

The Toxicology Information - List of POISINDEX® Products and IDENTIDEX® System Tablet & Capsule Identification links were displayed for all search results. There may or may not be a corresponding product or tablet/capsule for the search performed. Clicking either link opens the list to the closest alphabetical match to your search term.

Initial Results

Often, a search can produce matches in many documents and in multiple databases. When matches are found in more than one database, the Initial Results page is displayed.

Databases are organized into general information categories (e.g., Summary Documents, Drug Information, Disease Information, etc.) with the associated database names listed below and hypertext links to the right of each.

Go To: links are provided at the top of the Initial Results page to allow you to jump directly to a general information category.

When only one document within a database is found as a match, the document title name is displayed as a link.

Results (x) - When multiple documents find a match on the keyword either in the title or as a synonym, the total number found is listed beside the Results link. Click this link to open the Narrow Results page listing the documents found.
