RESEARCH STUDY

GATAD2B-Associated Neurodevelopmental Disorder

The Cedars-Sinai Neurogenetic and Neuromuscular Disease Clinic is conducting case series collection and report of patient data in individuals with GATAD2B-associated neurodevelopmental disorder (GAND).

- Seeking adults and children with GATAD2B-associated neurodevelopmental disorder
- One study visit (either in clinic or via telephone)
- The purpose is to gain more knowledge about this relatively new disorder
- The study visit will last approximately two to four hours

OVERVIEW OF PROCEDURES:

- We will explain the details of the GAND study.
- We will interview either you, your parent(s) or legal guardian, and request to collect and review all your medical records (including reviewing neuroimaging data and ophthalmology records).
- If possible, we will do a brief physical exam (including taking your blood pressure and checking your heart rate).
