Dear Patient,

Thank you for choosing Cedars-Sinai Medical Center for your imaging needs. Provided below is important information about your visit and the billing process for medical services at Cedars-Sinai.

About Your Visit

Screening Mammography

Screening Mammography plays a central role in early detection of breast cancers because it can show changes in the breast up to two years before a patient or physician can feel them. A Screening Mammogram involves taking two views of each breast for a total of four views. Your study will normally be read within five business days.

A Screening Mammogram is recommended every year beginning at age 40. If you have significant risk factors, your physician may recommend earlier screenings.

If you have any of the conditions below, please talk to your doctor about a Diagnostic Mammogram. You DO NOT qualify for a Screening Mammogram if you have had any of the following:

- Lump, nipple discharge or any other change in your breast in the past 3 months
- Mastectomy, breast surgery or a needle biopsy in the past 3 to 6 months
- Breast implant rupture or leakage
- If this Mammogram is a six-month follow-up

Diagnostic Mammography

Diagnostic Mammography is used to evaluate patients with risk factors, abnormal clinical findings such as a breast lump(s), breast pain or personal history that warrant a diagnostic study. Diagnostic Mammography may also be done after an abnormal Screening Mammogram to determine the cause of the area of concern on the screening exam. During a Diagnostic Mammogram, additional views may be taken of each breast. The study will be reviewed immediately by a subspecialized Imaging Physician and the results sent to your physician the same day.

This type of Mammogram will be sent to your insurance company as a diagnostic study. Your specific plan will determine whether you have a deductible or co-pay due.

Computer-Aided Detection

We are proud to be among the first to offer computer-aided detection (CAD) technology, a recent advance in the field of breast imaging. This state-of-the-art system is becoming the national standard of practice. CAD enhances images obtained from a digitally acquired Mammogram, and can aid in the detection of breast abnormalities, highlighting “regions of interest” such as abnormal areas of density, mass or calcification. In clinical studies, CAD has been shown to increase the detection of breast cancer.

Billing Information on Back
### About Your Bill

Cedars-Sinai Medical Center will submit a bill for your hospital services, which will include a charge for the Mammogram (Screening or Diagnostic) and CAD. Your specific plan will dictate whether you have a deductible or co-pay due. It is best to contact your insurer for information specific to your plan.

A board-certified Imaging Physician will send a separate bill for the interpretation of your Diagnostic Mammogram and CAD.
