2. 3 patients - MW Left Frontal Glioblastoma
   Phase 1 ICT-107 at 8+ Years

   - CP Right Temporal GBM
     Phase 2 ICT-107 at 2.5 years

   - TR Brainstem Glioma at 8+ years
Brain Tumor Vaccine

LOS ANGELES (Ivanhoe Newswire) -- Each year, 22,000 Americans are diagnosed with brain cancer. Glioblastomas are the most deadly types of brain tumors. Even with current treatments like chemo and radiation, most patients live less than two years. Now, a new vaccine is giving some the gift of time.

Michael Wulfe shouldn't even be alive -- much less running six miles uphill.

"Every time I do get to the top, I stop for just a second, and in my head, say a very short prayer that I am here on top of the hill, feeling like a normal, perfect, healthy person," Michael Wulfe, brain tumor survivor told Ivanhoe.

Wulfe was diagnosed with a deadly brain tumor -- called glioblastoma -- nearly four years ago.
Case #4: Axial MRI with contrast and Flair—Left Frontal GBM before and after surgery in May, 2007
Case #4 Follow up contrast/Flair MRI in October, 2013
Case 6: A follow up contrasted MRI in October, 2013:
