

Advanced Clinical Psychiatry

PS 250.99

General Information

COURSE CHAIR: Waguih William IsHak, MD, FAPA

CONTACT: telma.thomassian-lopez@cshs.org

DURATION: 3 weeks

Electives at Cedars-Sinai start in May. Please contact the coordinator as this elective is offered by arrangement.

Description

This elective will provide medical students with a rich experience in the interface between medicine and psychiatry at Cedars-Sinai Medical Center. Identification and treatment of psychiatric disorders due to general medical conditions, substance/medication induced psychiatric disorders. This elective is more suitable for medical students who are interested in strengthening their medico-psychiatric skills in a large general hospital setting. Medical students will be expected to review Consultation-Liaison articles for discussion. Students interested in research will have the opportunity to attend research activities related to Psychiatry-Medicine and Substance Use research projects and contribute to publications as a co-author.

Course Objectives

1. Knowledge and understanding on the biopsychosocial model of disease.
2. Knowledge of specific disease processes and coping techniques demonstrated by patients.
3. Basic science program designed to provide a comprehensive understanding of clinical psychopharmacology.
4. The learning of detailed history taking and psychiatric evaluation of patients with organic disorders.
5. Knowledge of correct and appropriate consultation techniques.
6. Knowledge of effective liaison relationship with the medical health care team.
7. Knowledge of the doctor/patient relationship.
8. Knowledge of the theoretical aspects of psychosomatic disorders.
9. Participate in research activities including data interpretation, manuscript drafting and co-authorship.
